Virginis*

OR

An Almanack for the
yeare of our Lord God

1 6 4 3:

Being the third after Bissextile
or Leap-yeare:

And

Calculated properly for the famous Uni-
versitie and Town of *Cambridge*,
where the pole is elevated
52 degr. 17 min.

Felix qui potuit rerum cognoscere causas.

Printed by *R. Daniel*, Printer to
the Universitie of *Cambridge*.

The golden number 10
The cycle of the sun. 28
The Epact. 20

Arn. Dom.
 1643.

The allowance for light gold.

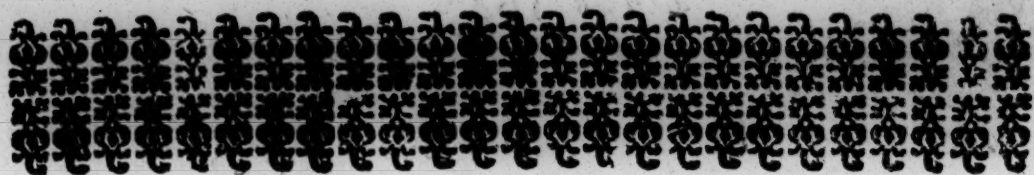

<i>Shillings.</i>			
In every piece of	33	the reme- die must not exceed	4 grains and an half.
	30		4 grains and an half.
	22		3 grains.
	20		3 grains.
	16 & 6 pence		2 grains and an half.
	11		1 grains.
	10		2 grains.
	5 & 6 pence		1 grain.
	5		1 grain.
	4 4 pen. 3 far.		1 grain.
	2 & 9 pence		half a grain.
	2 & 6 pence		half a grain.

Of the currancie of gold.

And note, that any piece of old gold, (as a 22 or 11 shillings piece) is payable for two pence a grain, when it exceedeth the remedie if it want not above the double remedie. But for new gold, (as 20, and 10) they must never exceed their remedie; for if they do, they are not to be offered in payment. Neither are the 22, 11, and such like, to be taken, if they exceed the double of their remedie. By observing this difference, the former table will be well understood.

A note of the time forbidding marriage.

When Advent-sunday cometh, marriage is forbidden untill Hilarie, or the 13 of *January*. Then at Septuagesima it goeth out again untill Low Sunday. Afterwards at Rogation it is also forbidden: but at Trinity-sunday it cometh in again, and so continueth untill Advent.

Of the foure quarters of the yeare. First of the Spring.

THat the World began at the Vernall Equinox, is agreeable to the opinions of the old ancient Fathers; as in my last yeares Almanacke you may see at large. I speak therefore first of the Spring, which this yeare takes beginning on the tenth day of March, at which time the glorious Sun enters into Aries. 33 minutes past three of the clock in the afternoon: the fourth degree of Virgo being then in the Horoscope; with which degree and 30 minutes that signe doth then ascend or arise upon our Horizon. This is the house of Mercurie, whom I finde to be the cheif Dominatour for this yeare: howbeit Saturn is Lord of this Quarter, his place being in Pisces, the house of Jupiter, at the time of this revolution. The Spring is like to be cold and backward, but may be something qualified by the Conjunction of the Sun and Jupiter, to whom the Sunne applies on the next day about eight of the clock at night. Astrologers say, that when Mercurie is Lord of the yeare, he varieth very often the qualitie of the aire, and corrupts the windes, chiefly in moist and windie signes; But in hot and drie signes he increaseth drought. *Nec dissentit Haly, ubi dicit: Mercurium in aere significare diversitatem, & facere multos graves & damnales ventos.* Yet neverthelesse he is like enough by his place in the scheame to stirre men up towards a studie of the ecclesiasticall laws and of other sciences: for he is so farre towards the end of the eight house of the Heavens, as we may well account him in the ninth, which is *Domus Religionis*, as Astrologians speak. This is that which is gatherable from their rules: but I (for my part) hold my peace, and in such a case affirm nothing.

Dove 1643.

Of the Summer.

THis quarter begins when the Sunne enters into the first scruple of Cancer: which will be this yeare on the eleventh day of June, at 16 minutes past 7 of the clock at night, at which time the 17 degree and 18 minutes of Sagittarius ascends upon our Horizon: 21 and 30 minutes of Libra being then in the middle heaven. Venus is Ladie of this Quarter, with whom the Moon and Mercurie have a share. This I take to be a signe of a wet Summer: for I find Venus to have 21 Dignities, the Moon 17, and Mercurie 15; And therefore wind as well as wet, at the meetings and aspects of these planets, especially in moist or windie signes; as in their due place is shewed.

Of Autumne.

Mercurie, who is Dominatour for the whole yeare, hath his cheifst power in Autumne, with whom Saturn and Luna do sometimes share. This quarter is like to afford winde nough, with many cold storms: It beginneth on the thirteenth day of Septemper, about tenne minutes past tenne of the clock in the forenoon, at which time the thirteenth degree and 43 min. of Scorpio ascends, the very beginning of Virgo being then in the midst of Heaven. It is like enough to begin to be windie about two dayes before, towards the latter end of Sturbridge fair; and on the eighteenth day, cold and cloudie with storms, as afterwards in the months is mentioned.

Of Winter.

WInter is that quarter which beginneth next. Mercurie is here also the particular and cheif Dominatour, to whom the

the Moon is next: they have equall dignities and yet Mercurie is the cheif, as being chief for the whole yeare. This quarter beginneth on the eleventh day of December, at the Sunnes entrance into the first minute of Capricorn; which will be this yeare at nine of the clock at night and eleven minutes after. The signe that ascends is Virgo, in the first half of the first degree: Taurus hath his place in the middle heaven, the tenth house beginning with the 20 degree and 30 minutes of the said signe. The generall temper is wet, and windie, or stormy winds, &c. These foure seasons, though by accident they differ something every yeare, yet untill the world endeth they shall be, succeeding orderly one another: for, *while the Earth remaineth, seed time and harvest, cold and heat, Summer and winter, and Day and Night shall not cease*, Gen. 8. 22.

Ver præbet flores, saith the Poet; and à virendo nominatur: quia tunc omnia virent & florent.

Formosa est messibus Æstas:

——— *For now he crownes his Ceres
with gilded eares, as yellow as her hair is;
Till th' reaper, panting both for heat and pain,
with crooked rasor crops the tufted plain.*

Autumne gives fruit, for *Poma dat Autumnus*: and is so called from *Autumno*, which signifieth to make ripe. Or else it is *Autumne, à bonorum anni augmentatione.*

And in a word; *igne levatur Hyems*: to which, with moderation, may be sometimes added that *Bacchi massicus humor*: For these two will now do wondrous well.

January hath xxxi dayes.

Last quarter the 3 day, 47 min. past 6 in the morning.

New moon the 10 day, 49 min. past 5 in the morning.

First quarter the 16 day, 35 min. past 10 at night.

Full moon the 24 day, 37 min. past 8 at night.

Days of the moneth

The houre
and minute
of

 Sunne
rising setting

On the 12 of this moneth Venus and the Moon are both together, about 6 a clock at night. On the next evening you may see the Moon between Jupiter and Saturn, and Venus not far from them: their place is Pisces, which (as is observed by Astrologers) is the night house of Jupiter, exaltation of Venus; but the Hall of Mercurie.

In this moneth is the greateli of Conjunctions that hath been for many ages: for now is a meeting of all the Planets but Mars in Pisces. Mercurie meets with Venus there at his first entring, and joyns himself unto her on the sixth day. The Sun and Moon are there on the 1x day: the Sun and Venus in conjunction there the same day: so also the Moon and Mercurie; But on the day before, the Moon & Venus. Then on the 20 day are conjunctions of Saturn & Jupiter, of Saturn and Mercurie, and of Jupiter and Mercurie: And all these in Pisces.

You may see Venus with the Moon on the seventh day; and on the ninth and tenth the Sun, Moon, Saturn and Jupiter are in a manner all together. The Sun suffers an Eclipse on the ninth day, but not in our Horizon: and on the tenth day he enters into the first scruple of Aries at three hours and three and thirtie minutes after noon, Saturn being then in the Apogee of his Epicycle.

On the fifth day early in the morning, you may see Venus with the Moon: The next day Saturn and Mercurie are in Conjunction, but under the Sun-beams; who also shelters Jupiter at the same time.

Mars may be seen with the Moon on the 23 day, at which time he and Saturn behold each other not with a friendly Trine, but with a Quarrile aspect.

On the first of this moneth Saturn and Venus are in Con-
junction in Aries, the house of Mars, and the Moon then in
her Perigeon, with whom on the fourth day early in the mor-
ning are the two foresaid planets. Jupiter is not farre from
them, and by the 12 day the Moon and Mars are got together.
But Mercurie is the Sunnes page, and by the 23 day is found
to be in Conjunction with him.

On the ninth day, the Moon is got into the house of the Sunne, and may bee sene there with Mars late at night. The Sunne arrives into his Summer Solstice on the eleventh day, about a quarter of an houre past seven at night; and then is Saturn almost in a perfect Trine to Mars. The said Saturn is with the Moon on the 27 day, and Iupiter on the 28th, about 10 at night; which when the ☾ is up may be seen.

On the sixth day if you can but see the Moon, you may see Mars with her in Virgo the house of Mercurie. The day after the Sunne and Iupiter are in a trine. But if you would see Saturne, you may see him and the Moon together in Aries the house of Mars on the 21 day; and on the 22 day she meets with Iupiter, at which time he and Mercurie are in a Trine, about foure at night.

Venus rises a little before the Moon on the first day very early in the Morning, Mercurie not being farre away from them. The Sunne is eclipsed on the next day, but will not be seene in our horizon. At the full Moon you may see Saturn with Lady Luna, between 7 and 8 at night, the Sun being then in opposition to them both. The next day Luna opposeth Mars and Mercurie, and is with Iupiter soone after.

Mercurie is 17 degrees from the Sun, and is with the Moon the fourth day: but on the eight day there is a Coniunction of the Sun & Mars in the 24 degree of Libra. Saturn wil be with the Moon the 14. day, and on the 16 day she and Iupiter are together also in Aries the house of Mars. But as for Mars and Venus, they are hid & kept close under the beams of the Sun.

The Moon meets with Saturn on the 8 day, at which time you may see them together in the first degree of Aries. On the next night she and Iupiter are together, about such time as Mars meets with Mercurie. By the Quadrate of the Sun and Saturn on the 13 day neare 8 at night, I think we shall have snow about that time, as well as frost; and a cold week is like enough.

Dove 1643.

Of the Eclipses this yeere.

THere will be foure Eclipses this yeere, two of the Sunne and two of the Moon : of all which, the last only of the Moon can be seen of us.

This Eclipse will be on the seventeenth day of September ; the beginning of it is not seen of us ; for it beginneth before the Moon riseth, at about halfe an houre past five in the afternoon, which will bee 22 minutes before the sunne setteth. The middle of the Eclipse will be 43 minutes past six ; at which time the sunne hath been down for the space of 51 minutes ; that is, an houre wanting 9 minutes. And by eight of the clock this Eclipse is quite ended ; the whole time from first to last, being two houres and an halfe. It is but a partile Eclipse not fully amounting to the quantity of six Digits. The Sunnes place is in the fourth degree of *Libra*, and about 17 minutes ; and the Moone in the opposite point unto it, viz. 4. 17. of *Aries*, the house of *Mars*, exaltation and triplicite of the Sunne, the Detriment of *Venus*, and fall of *Saturn* : Howbeit *Saturn* and *Venus*, are chiefe Dominatours ; the next to whom is *Mercurie*, and then *Iupiter* ; but *Mars* though he hath many dignities, yet are his detriments in a manner as many, and therefore reckoned as a Planet of little or no power in this Eclipse. *Saturn* and the Moon are both together, and in one house ; namely, in *Aries* the house of *Mars*, which at this time is the twelfth House of the Heavens. *Venus* is in 16. 44. of *Virgo*, which is the House of *Mercury* the sixth House, and House of sicknesse ; which is made so much the better by reason of *Venus* her being there ; even as the twelfth (being the House of imprisonments and sadnesse) is so much the worse by *Saturn* his being there. But (as *Ptolomie* writeth,) *Parva Eclipses parum nocent, & in pauca operantur*

rantur. Mediores in multa, & majorem habent efficaciam. Maxime vero & maximè, & in pleraque suam efficaciam diffundunt. And as for the duration of the effects, they continue two moneths and about fifteen dayes.

To the Reader concerning the following
T A B L E.

Gentle Reader,

THe following table is carefully composed, though not without much paines and industrie. I endeavoured the like the last yeere, but came not so neere the right reckoning as now I hope I have: The severall periods by which the yeers from the Creation are accounted, be all taken out of Scripture, and are these, *viz.*

From the Creation to the Flood	1656
From the Flood to the Promise	427
From the Promise to the Law	430
From the Law to the Temple	480
From the Temple to the Captivitie	427
From the Captivitie to the Return	070
From the Returne to Christ	483

The totall Summe, 3973

This is all which I now shall mention; it would require a just volumne to discourse of the whole at large, and shew how other things (not in holy writ) have here their right places. And therefore not intending to enlarge my selfe to a full discourse in such a little book as this, I commit all (without any further opening) to thy candide censure. and not uncurteous acceptation; adding only this, that the yeeres from the Return to Christ, end at his Baptisme.

Dove. 1643.

A Chronologicall Table. Memorable Accidents.

The current years
before Christ.

The time expired
of the years since.

3948	The Creation of the world, in Aprill as is most probable, at the Suns entrance into Aries, for though the vernal Equi- nox be now in March, yet notwithstanding it was then in Aprill. —————	5598
1656 2292	In this yeare was Noahs flood. —————	3935
1717 2231	The first year of the Caldæan Date, at which time it seems the people of the east came into the Land of Shinar, Gen. 11. 2.	
1718 2230	They begin to build the Citie and the Tower of Babel, 40 years before the confu- sion of Tongues, as Glycas recorderh. —————	3874
1757 2191	In this yeare was Phaleg born, at the same time when tongues were confound- ed. Gen. 10. In the same yeare Nimrod erects a Kingdome in Caldæa —————	3873
1842 2106	In this yeare Assur begins a Kingdome in Assyria, which, according to Diodorus, lasted to the death of Sardanapalus, 1360. yeeres. —————	3834
1928 2020	In this yeare, being the 28 yeare of Be- lus the Chaldeans (according to Africa- ni.) are subdued to the Assyrians. —————	3749
1966 1982	Ninus succedes his father Belus. —————	3663
2008 1940	In this yeare, being the 43 of Ninus, Abram was borne. —————	3625
2084 1864	In the beginning of this yeare, Abram received the promise, which was 430 yea. before the Law. Exod. 12. 40. —————	3583

3948

The yeares af-
ter Christ.

In this yeare, on the 25 of December, was our Saviour borne, according to the common account received from Dionysius Exiguus: nevertheless begins not the first yeare thereof until the January after.

3949

6.1

This was the first yeare of Christ, according to the foresaid Dionysius: to which time the yeares before Christ, through out this Table, have had their reference; and by which (as it runneth on) I shall date the Accidents following; adding only (for a while) the true yeares of Christ on the left hand of the other, in the same Columnne with them.

1643

3973

31.25

In this yeare Iohn Baptist begins to preach and baptize.

1642

3974

31.26

In this yeare at the Spring, our Saviour being as it were 30 yeares old, and about to begin his 31 yeare, was baptized, even at the end of 69 of Daniels weekes, and now was also a yeare of Iulio which began at the Autumne before Luke. 4.19.

1618

3978

35.30

In this yeare, at Easter on the 7 of April was the Passion of our blessed Saviour, in the middle of Daniels 70 weeke, even when he was fully 34 yeares old. Dan. 9

1617

Years of
the world

3979 36.31

In the 36th yeare (which was 36 yeares be-
fore St. Paul and St. Peter suffered) St.
Stephen was crowned with Martyr-
dome, and St. Paul converted to the chris-
tian faith.

1612

3980 37.32

This was the last yeere of Dan. weeks.

1611

3981 38.33

In this yeare St. Peter is sent to Cornel

1610

3992 49.44

Agrippa, who put S. James to death, is
eaten up of moynes.

1599

4009 66.61

Rome, by the commandement of Nero,
is set on fire.

1582

4011 68.63

The beginning of the first Persecution
of Christians, in the tenth yeare of Ne-
ro.

1580

4014 71.66

Saint Paul is beheaded at Rome, and S.
Peter crucified.

1577

4018 75.70

Ierusalem destroyed by Titus

1573

4023 80.75

In this yeare the Temple of Peace at
Rome is finished and dedicated by Vespas-
ian, into which the Ornamentals of the
late Temple of the Jewes are put

1568

4037 94.89

The second Persecution begins under
Domitian.

1554

4038 95.90

Saint Iohn banished unto the Ile of
Pachmos.

1553

4043 100.95

About this time S. Iohn writes his Re-
velation, velle Irenæo lib. 5.

1548

4048 105.00

The third Persecution under Trajan.

1543

4062 119.114

The Jewes rebelling against the Ro-
mans, are miserably slain in Egypt and
Cyprus, to the number of 200000.

1529

4074 131.136

The fourth Persecution under Adrian.

1517

4083 140.135

A new towne built whereabouts the
old Ierusalem was, and called Elia. This

Dove 1643.

Observations for Husbanamen.

IN *Iannarie* take off superfluous branches from Fruit-trees, and prepare your ground for Gardens, uncover Tree-Roots, cut your Vines in some of the Twelve dayes.

Set Quick-sets, Roses, and Sallets in the moneth of *February*; And now cover up the Roots of your Trees with good Earth, which you opened before in the beginning of *Iannarie*.

In *March* you may graft; but in planting and grafting chuse a warme time: wherefore let not the winde be in the East or North, because such windes are commonly nipping, especially being helped by any aspect of the Moone with *Saturne* or *Venus* in cold Signes, as *Virgo*, *Capricorne*, *Taurus*, *Scorpio*, *Pisces*, or *Cancer*.

In the end of *April*, or beginning of *May*, set and sowe tender Herbes and Seeds in your Gardens, in a good temperature of Aire.

Remove young trees, either in the end of *October*, in *November*, or *February*, the Moone encreasing, and be sure to set that side South, which was South before, because it cannot endure the cold North.

Celd cattell, the Moone in *Aries*, *Sagittarius*, or in *Capricorne*, being in her last quarter.

Gather all fruits that you meane to keepe, in a dry time, when the Moone is at the full.

Sow all such Seedes as have round rootes (as Onyons, Leekes, Turneps, &c.) either three or foure dayes before the full, or three or foure dayes after the full.
